CAREER PATH

Timeline — period on the left, achievements on the right

EDUCATION

2004 — 2009

SPbGTI (TU) — Technological University

WHAT I DID

Saint Petersburg State Technological Institute (Technical University). Engineering school — a systematic approach to problem solving.

ACHIEVEMENTS

- Engineering degree from one of SPb's leading technical universities — the foundation for future projects.

TYRE BUSINESS

2007 — 2012

«Na kolyosah.ru» network — from manager to director

● 2007–2009 · PARALLEL: EDUCATION

WHAT I DID

I joined with no industry experience and became a manager within six months: I mastered tyre and wheel selection in all its detail — from safety to pricing — and got to grips with 1C, accounting and the cash desk; large sums passed through my hands daily. I led a team and introduced new directions.

Out of 600+ employees, the management chose me — as the most effective — and appointed me store director.

ACHIEVEMENTS

- At **23** — the **youngest director** of a tyre centre in the network (600+ employees).
- Centre manager just **6 months** after joining.
- Led a team of **10 people**.
- On the **newly launched** lines (new to the network), my centre delivered results **higher** than the top ones.

ARCHITECTURE STUDIO

2013 — present

Own business · practising architect

WHAT I DID

Founded and led my own architecture studio. I design cottages in any technology — timber, block, monolithic, frame. I built a clear path for the client: first contact → concept sketches → architecture → 3D renderings → structural design → engineering systems → estimate. The client stays calm because everything agreed upon is delivered to a high standard, and after the project they happily keep working with our builders.

ACHIEVEMENTS

- **5 000+** completed projects — cottages, saunas, cabins, gazebos, small architecture.
- **10 000+** finished 3D renderings.
- Studio of **15 people** (2015–2016).
- From **15 to 25 projects** per month.
- Outsourcing for SPb's top construction companies.

3D COURSES

2015 — 2017

Teaching — courses in 3D and design

● 2015–2017 · PARALLEL: ARCHITECTURE STUDIO

WHAT I DID

Alongside practice I ran courses in 3D rendering and architectural design — first and foremost for my own staff, and then outsiders wanted to learn too. I taught on real studio cases.

ACHIEVEMENTS

- I taught **my own team** first — the courses existed so I wouldn't have to explain things to each person separately.
- **Great feedback** from students in our social media — everyone was happy.

PROFESSIONAL TOOLKIT

ArchiCAD

3ds Max

Photoshop

Revit

AutoCAD

Fusion 360

SolidWorks

Python

C++

Java

HTML

CSS

PHP

Programming and neural networks have been my long-standing interest. I tested new tools and wrote my own plugins and utilities that simplify and speed up the work. **Now the whole world has come to this.**

ABOUT ME

Technology, architecture and family

In brief

Married, three children. I combine architectural practice, technology and creativity. Programming and neural networks have interested me since their very beginning — I tested, adopted and automated my own processes.

I love technology and follow its development. I have a music education; I play music, billiards and go fishing at an **"enthusiast++"** level.

PROPOSAL

What I'm looking for in a role

ROLE 01

Cottage design, full cycle

Designing cottages for good money: the full cycle with client management. Doing what I do best without being distracted by marketing, advertising or admin.

- **Building architecture** — volumes, layouts, style, aesthetics
- **Structure and engineering** — thinking solutions through at an early stage, so the project is buildable and precise
- **Facades and design** — solutions that look great and work in reality
- **Teamwork** — preparing and handing over tasks to related specialists, controlling the quality of their output
- **Client coordination** — guiding the client through key decisions from sketch to project handover

ROLE 02

Head of the design department

Guiding clients from start to finish while leading a team of designers, running the process so that design moves fast, accurately and without rework.

- **Client management** — from the first meeting to project handover, including construction, design and furnishing
- **Team** — managing architects, structural engineers and designers, allocating tasks and controlling quality
- **Processes** — setting up the work and interaction of specialists: as fast, accurate and high-quality as possible, without rework
- **Knowledge transfer** — putting all my experience into the team: foreseeing details at the very first stages, training and tuning every design process

Why it matters

Extensive experience lets me foresee many details at the very first stages. But combining design and business organisation gets harder: switching between the two slows down success in each. Constant waves — first marketing and chasing orders, then doing the work — prevent focus. I want to do one thing and do it at a high level.

Ideal terms

What would fully suit me. Happy to discuss the details.

SALARY

from 200,000 ₺ + bonuses + KPI

base salary from 150,000 ₺ — guaranteed

FORMAT

Remote + office 1–2 times a week

site visits and business trips as needed

INTERVIEWS

Online — no time lost on travel

once we agree on the essentials — happy to meet in person

MOBILITY

Own car

driving licence category B
